

FEATURES AND BENEFITS

- ✓ Skin-to-skin bonding
- ✓ Hands-free couplet care that allows mobility
- ✓ X-Static thermoregulatory material that reduces the risk of hypothermia
- ✓ Washable and reusable
- ✓ Suitable for newborns and infants between 4 and 14 lb (1.8 to 6.3 kg)
- ✓ Newborn's face is visible, making it easy to monitor breathing
- ✓ Nano guard supports newborn's head and neck
- ✓ Supports newborn's limbs in natural in utero position
- ✓ Features a zipper that resists 60 lbs forces and two sets of eye hook closures for added security
- ✓ Allows tubes, connectors or umbilical cords to pass through
- ✓ Breastfeeding remains possible during use
- ✓ Compact and easy to store
- ✓ FDA Cleared
- ✓ Listed on AAP and NASEMSO's pediatric transport list

AEGIS TESTIMONIALS FROM HEALTHCARE PROFESSIONALS

Tomi, RN, IBCLC
Perinatal Safety Specialist

"I love AEGIS. Its a fantastic product. We have been testing it with some of our L&D nurses and they are toughest critics of all and they love it and can't wait to share it with our patients."

Collette
OB/GYN

"As a member of the tribe of women who are dedicated to safe delivery of each precious baby, this creation is heaven sent. It will revolutionize how mothers care for and protect their newborns. And it will transform hospital practices around the world."

Kelly, RN
NICU Director

"We absolutely love AEGIS. We are over the top excited for the patient safety that it provides and the high quality mom and baby bonding it allows."

1 PRODUCT, 3 USES

A patented, award-winning, hands free, skin-to-skin couplet-care transport system designed for safe, zero-separation for multi-patient ambulance transports to minimize risk of injury & hypothermia. AEGIS provides easy accessibility for the transport team to assess, continually monitor & maintain thermoregulation for mother & baby throughout transport.

HOW DOES SKIN-TO-SKIN CONTACT AFFECT NEWBORNS?

More Than 40 years of research demonstrates the powerful benefits of Skin-To-Skin contact for newborns.

Babies held Skin-To-Skin are shown to have stable vital signs (Breathing, Heart rate, Temperature, Blood Pressure & Blood glucose levels.) Babies cry less, sleep & feed better & absorb the nutrients & digest their food better. Mothers also benefit, helping women with pain management & milk production. Partners can enjoy Skin-To-Skin as a special way to bond with baby too.

X-STATIC® SILVER TECHNOLOGY

Made with 99.9% pure metallic silver, X-STATIC® is designed to shield baby by naturally inhibiting the growth of bacteria on the surface of fabrics.

The X-STATIC® fiber is woven directly into the garment and will not wash out over time through laundering. X-STATIC® contains pure silver without any chemicals, so this is why X-STATIC® is safe for babies and the environment. X-Static silver combined with skin to skin maintains thermoregulation to reduce the risk of cold stress & hypothermia.

C-SECTION "COUPLLET CARE"

Moms lose their ability to maintain their own body temperature when given anesthesia, so how are they supposed to warm baby?

Newborns are at an increased risk of hypothermia due to their high surface area to volume ratio & the increased evaporative heat losses from the skin, which is associated with increased morbidity & mortality. X-Static silver combined with skin to skin maintains thermoregulation to reduce the risk of cold stress & hypothermia from birth throughout the neonatal phase in the O.R, PACU, NICU & postpartum patient rooms.

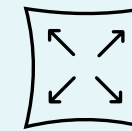

BABY IS PROPERLY POSITIONED ACCORDING TO AAP GUIDELINES

Designed for hospital use

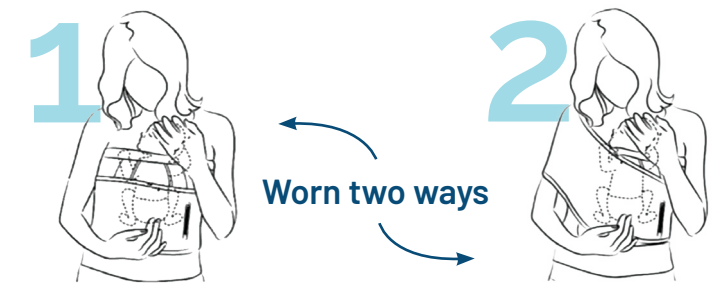

2 eye hooks and zipper on the left side, designed to accommodate the circulating nurse and hospital requirements. Eye hooks offer a 2nd set of customizable safety closures.

Compression panels

Yoga like comfort with 4 way stretch and compression panels designed to position baby according to the AAP guidelines. The additional Nano band at the top offers neck support for proper positioning.

Worn two ways

1 Tube top style, for sitting and lying down.

2 Shoulder support strap formobility/ walking, distribute babies weight accross mom's back. Shoulder strap supports and lift baby for proper positioning.
